Background and Purpose

Artificial intelligence is becoming more common across professional industries. Companies are looking for ways to use AI to improve productivity, organize information, reduce repetitive tasks, and support better decision-making.

In AEC-related work, AI can be useful for:

- Estimating and bid support
- Document review
- Scheduling and project management
- Risk analysis
- Financial planning and reporting

Purpose of the project:

- Compare AI adoption in two AEC-related company settings
- Identify opportunities, barriers, risks, and future expectations
- Understand how AI can support professionals without replacing human judgment

Companies Interviewed

Juan Romero
Lead Estimator

Diego Rapalino
Financial Analyst

Methodology

Research Approach

- Qualitative research approach
- Two professional interviews
- Interviews conducted by phone
- Same structured questions used for both participants

Interview Questions Focused On

- Current or possible AI use
- AI tools and applications
- Benefits and barriers
- Risks and human review
- Future expectations

Analysis

- Responses were reviewed and grouped into common themes
- Findings were compared with research on AI adoption in AEC and related professional industries

Key Findings

Area	Gosalia Concrete Constructors, Inc.	Estudios y Consultorias S.A.S.
Main AI Use	Estimating support and document review	Financial analysis and report support
Main Benefit	Saves time reviewing contracts and bid documents	Saves time organizing data and preparing reports
Main Concern	Accuracy and specialized concrete work	Confidentiality and financial accuracy
Human Review	Required for final estimating decisions	Required for final financial conclusions

**“AI can support estimating,
but final decisions still
require the estimator’s
judgment.”**

**— Juan Romero, Lead
Estimator**

AI Tools and Use Cases

Gosalia Concrete Constructors, Inc.

Tools:

- ChatGPT
- Similar AI platforms

Cases:

- Contract review
- Specification summaries
- Bid document review
- Identifying missing or conflicting information
- Organizing bid risks before submitting proposals

Estudios y Consultorias S.A.S.

Tools:

- ChatGPT
- Microsoft Copilot
- Gemini
- AI features in Excel

Cases:

- Financial summaries
- Report drafting
- Data organization
- Pattern identification
- Presentation preparation

CHALLENGES AND SUCCESS FACTORS

ACCURACY —————> AI outputs must be checked carefully

PRIVACY —————> Sensitive company and client data must be protected

**SPECIALIZED
TOOLS** —————> General AI tools may not fit every scope

TRAINING —————> Employees need guidance on responsible AI use

**HUMAN
REVIEW** —————> Final decisions should stay with professionals

Recommendations and Final Takeaway

AI Should Support, Not Replace

Successful AI adoption depends on trust, training, data protection, and human judgment.

Start with low-risk tasks

Use AI first for summaries, drafts, document review, and data organization.

Protect sensitive information

Create clear rules for contracts, pricing, financial data, and client information.

Keep professionals in control

AI can assist the process, but final decisions should be made by experienced professionals.

Thanks!
