Screenshot of Headline

A screenshot of a Forbes article page. The top navigation bar is black with the Forbes logo on the left, a red 'Subscribe: Less than \$1.50/wk' button in the center, and a user profile icon with a red '5+' badge on the right. Below the navigation bar, the word 'INNOVATION' is displayed in a light gray font. The main headline, 'When AI Outpaces Human Judgment In The Supply Chain', is shown in a large, dark serif font, with the first two lines highlighted in a light gray background. Below the headline, there is a circular icon for the 'Forbes Technology Council' and text indicating the author is 'Rachid Labrik', a Forbes Councils Member, writing for the 'Forbes Technology Council' as a 'COUNCIL POST' (membership fee-based). At the bottom, the publication date and time are given as 'Published Apr 06, 2026, 07:30am EDT'.

MAIN FINDINGS AND ARGUMENTS

- AI is transforming supply chain operations (forecasting, inventory, sourcing)
- Enables automation and data-driven decision-making
- Improves efficiency but does not always improve outcomes
- Organizations struggle due to outdated decision-making structures
- Human judgment remains essential for interpreting AI recommendations

BROADER IMPLICATIONS FOR SOCIETY

- AI is shifting work from execution to interpretation
- Increases demand for skills like data literacy and critical thinking
- Creates challenges such as skill gaps and workforce anxiety
- Humans remain responsible for decisions despite AI involvement
- Emphasizes importance of leadership, trust, and adaptability

WHY IT MATTER IN CONSTRUCTION?

- AI can improve procurement, logistics, and material planning
- Enhances forecasting, inventory control, and project efficiency
- Supports better decision-making in complex construction projects
- Requires professionals to interpret and validate AI outputs
- Over-reliance on AI can create risks without proper understanding
